

Publishing Sites on Premise Azure and AWS Including Redis Cache

Peter Kellner

MICROSOFT MVP, CONSULTANT AND AUTHOR

@pkellner PeterKellner.net

Publishing Multi-tenant Web Sites to on Premise Azure and AWS

Visual Studio publishing

Multi-tenant DNS configuration and theory

Setting up and installing multi-tenant apps
on IIS on premise

Setting up and configuring Redis for cache
on a local server

Deploying an ASP.NET web site and SQL
Server to Azure

Deploying an ASP.NET web site and SQL
Server to Amazon Web Services (AWS)

Deploying a Redis server on Azure to
support our ASP.NET multi-tenant app

Deploying to IIS on Servers Either Virtual or Physical

Type of servers

Setting up DNS records (A and CNAME)

IIS setup including header records

Visual Studio publish settings

Demonstration

Publishing Multi-tenant Module Roadmap

On Prem	Azure	AWS	
			DNS
			Account Setup
			Web Site Setup
			SQL Server Setup
			Firewall
			Web.Config Settings
			Publish
			Install Tools
			Redis

DNS Record Setup

A Records

onpremise.kellner
multitenant.com
points to
206.72.118.158

CNAME Records

onpremise-angu.kellnermultitenant.com

onpremise-svcc.kellnermultitenant.com

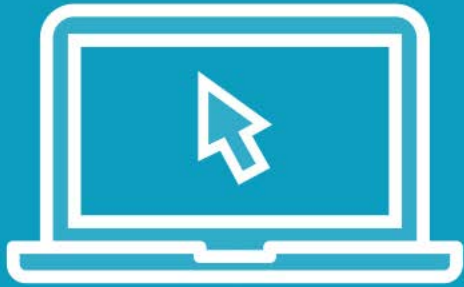

onpremise-cssc.kellnermultitenant.com

all point to

onpremise.kellnermultitenant.com

Demo

Basic IIS setup

Application pools and versions

Header records

Deploying to IIS on Servers Either Virtual or Physical

Type of servers

Setting up DNS Records (A and CNAME)

IIS setup including header records

Visual Studio Publish Settings

Demonstration

Adding Redis Cache Both on Premise and Using Azure

What does Redis do for us

Installing Redis on dedicated hardware

Adding a Redis cache provider to our multi-tenant web site

Using Redis from an Azure web site for excellent scaling

Adding Redis Cache Both on Premise and Using Azure

Adding Redis Cache Both on Premise and Using Azure

Adding Redis Cache Both on Premise and Using Azure

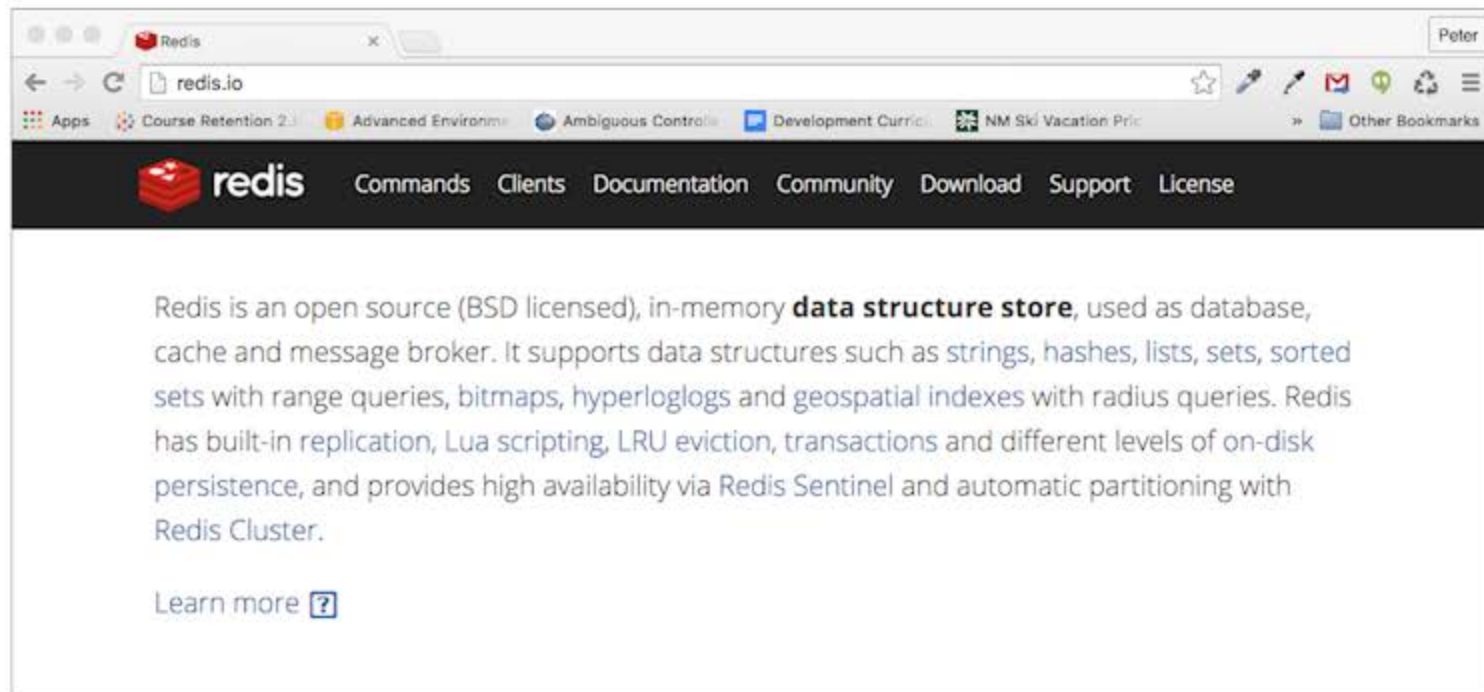

Adding Redis Cache Both on Premise and Using Azure

Adding Redis Cache Both on Premise and Using Azure

What does Redis do for us

Deploying a Web Farm Multi- tenant Website with SQL Server to AWS

Configuring SQL Server RDS on AWS

Reviewing AWS security groups

Updating web.config connection strings

Deploying with Visual Studio and the AWS extension

Setting up DNS records (CNAME)

Demonstrations

Summary

Deployed on premise

Deployed Azure

Deployed Amazon AWS

Configured Redis cache

Deployed Redis cache

DNS setup everywhere
