# Multitenancy

From Wikipedia, the free encyclopedia

The term "**software multitenancy**" refers to a [software architecture](#) in which a single [instance](#) of [software](#) runs on a server and serves multiple tenants. A tenant is a group of users who share a common access with specific privileges to the software instance. With a multitenant architecture, a [software application](#) is designed to provide every tenant a dedicated share of the instance - including its data, configuration, user management, tenant individual functionality and [non-functional properties](#). Multitenancy contrasts with multi-instance architectures, where separate software instances operate on behalf of different tenants. <sup>[1]</sup>
